

TECHNICAL ASSIGNMENT

JUNIOR WEB DEVELOPER

Travel & Tourism Homepage

WordPress • HTML • Astro • AI-assisted development

1. ASSIGNMENT OBJECTIVE

Create a simple, modern and responsive homepage for a fictional Travel & Tourism website. The task is designed to reflect the type of website work you may handle at Teknopyy.

What we want to evaluate

- Basic web development and frontend fundamentals
- Ability to convert a written UI brief into a working website
- Responsive design and attention to detail
- Basic understanding of WordPress, HTML or Astro
- Practical use of AI tools
- GitHub and website deployment
- Ability to understand and explain your own work

2. PROJECT BRIEF

Suggested brand: Wanderly Tagline: Discover More. Travel Further.

Build a homepage for a fictional travel company. The website should look clean, modern and professional and encourage visitors to explore destinations and plan a trip.

3. CHOOSE ONE DEVELOPMENT METHOD

You must choose ONE of the following:

OPTION A — WORDPRESS	Preferred if you are comfortable with WordPress. Build the homepage in WordPress and make the main content reasonably editable through WordPress.
OPTION B — HTML / CSS / JS	Build the homepage using clean HTML, CSS and JavaScript. Focus on semantic HTML, responsive CSS and simple interactions.
OPTION C — ASTRO	Build the homepage using Astro with a simple component-based structure. Advanced Astro knowledge is not expected.

Important: Do not simply import a complete ready-made website/template and submit it with text or image changes. We want to see your own implementation and decisions.

4. HOMEPAGE REQUIREMENTS

01 Header	Logo/brand name, Home, Destinations, Packages, About, Contact and a “Plan Your Trip” button. Mobile navigation should be usable.
02 Hero	Travel image, headline “Explore the World, Your Way”, short description and an “Explore Destinations” button.
03 Popular Destinations	Four cards such as Bali, Dubai, Maldives and Switzerland. Include image, destination name, short text and Explore button.
04 Travel Packages	Three cards with image, package name, duration, starting price and button.
05 Why Choose Us	Three simple benefits such as Best Travel Deals, Handpicked Destinations and 24/7 Support.
06 Final CTA	Example: “Ready for Your Next Adventure?” with a “Plan Your Trip” button.
07 Footer	Website name, short description, useful links, contact information and social icons.

5. DESIGN REQUIREMENTS

- Keep the website clean, modern, attractive and travel-focused.
- Choose your own colours, fonts, images and layout details.
- Use good spacing, readable typography and clear call-to-action buttons.
- Check the design on desktop, tablet and mobile.
- There should be no obvious broken layout or horizontal scrolling on mobile.

6. BASIC FUNCTIONALITY

- Navigation links should work.
- Buttons should be clickable and lead somewhere sensible.
- Add a mobile menu if needed.
- Simple hover effects or interactions are welcome.
- No booking backend, payment gateway, database or real travel API is required.

7. AI TOOL USAGE

You are encouraged to use AI tools such as ChatGPT, Claude, Cursor, GitHub Copilot or Figma AI. AI can be used for design ideas, initial code, content, troubleshooting and improvements. You must understand the code you submit.

8. GITHUB & DEPLOYMENT

- GitHub: Create a public repository containing the complete project and a simple README.
- Deployment: Deploy using Vercel or Netlify. For WordPress, provide a working accessible URL or the requested local/staging setup if arranged with the Teknoppo team.
- Repository: Do not include passwords, API keys or other sensitive information.

9. SUBMISSION

Candidate Name	
Chosen Technology	WordPress / HTML / Astro
GitHub Repository	
Live Website / Staging URL	
AI Tools Used	
Approx. Time Taken	

10. TIME LIMIT

Recommended time: 3-5 hours. Do not spend several days on the task. A simple, well-finished website is preferred over a complicated unfinished one.

11. NEXT-ROUND PRACTICAL CHECK

If shortlisted, you may be asked to make a small change to your submitted website during a short screen-share session. For example: change the hero CTA, add a simple destination dropdown, update a section or fix a mobile layout issue.

This is to understand whether you can work with and explain the code you submitted, rather than simply generating a website with AI.

12. WHAT WE ARE LOOKING FOR

- Good basic technical ability
- Clean and responsive implementation
- Comfort with WordPress, HTML or Astro
- Good design sense
- Practical AI usage
- Learning ability and problem solving
- Ability to explain your implementation

OUR PRIORITY: A CLEAN, RESPONSIVE WEBSITE THAT WORKS WELL — NOT AN OVERLY COMPLEX PROJECT.
